

Video-verified proof of sobriety.

BACtrack View is an app-based, remote alcohol monitoring service that helps users prove sobriety - starting at only \$79.99/month.

Police-Grade Accuracy

Each user is given a discreet BACtrack Mobile smartphone breathalyzer, which uses a police-grade fuel cell sensor to deliver reliable and accurate results. Every test, every time.

Automated Accountability

SMS messages prompt users when it's time to take a breathalyzer test, and the video-verified test results are instantly transmitted to the app for monitors to review.

Court-Ready Records

It's easy to download a PDF report to submit in court. All reports neatly display the time, date, and recorded BAC of each test.
